

ChatGPT VOICE USAGE PRESENTATION

Who is the User?

Target Group: Working Professionals

- **Most are workers:** 78.6% of respondents have jobs.
- **Young Adults:** 61.5% are between 25 and 34 years old.
- **Longevity:** 61.5% have used the app for >1 year.

Why them?

They are the biggest group, but they don't use voice. These users are busy professionals who want to save time. 56.4% rarely use voice, they keep typing because they are scared of making mistakes. If we fix this, they will use the app much more.

K RAJESH KUMAR
BUSY PROFESSIONAL

DEMOGRAPHICS: 26, Employed, Experienced App User (>1 year).

GOALS & MOTIVATIONS: Save time, Maximize efficiency.

PAIN POINTS: Busy, rarely uses voice features. Prefers typing due to fixing messy answers.

"I don't have time for errors; typing is safer."

Hypotheses (Why are they not using Voice?)

64.1% Working from Home

"I need it to be perfect."

40.5% feel safer typing to "edit and structure" thoughts. They think speaking is unstructured and leads to wasting time fixing messy answers.

30.8% Working from Office

"I can't talk freely here because it is too public and loud."

Privacy: 30.8% don't feel comfortable speaking out loud because the team might hear them.

Background Noise: The office is too noisy, the app will get confused and generate bad result.

Pain Point: Trust Issue. Users think voice input is risky. At home, it risks being "messy." At the office, it risks being "wrong" or "heard."

They are stuck in a habit. Users have been typing for over a year. If we don't prove that voice is clean and accurate now, they will never change.

Problem Framing Canvas

1. WHAT IS THE TRUE PROBLEM?

Fear of Bad Quality & Privacy.

Users do not use voice because they think background noise will ruin the result, and they cannot "edit" their spoken words to make them perfect. Also, speaking at work is not private.

2. HOW DO WE KNOW IT IS A REAL PROBLEM?

Data: 38.2% prefer typing for control.

Privacy: 29.4% fear being heard.

Research: Users are afraid the app capture background noise and fail.

3. WHO ARE THE CUSTOMERS FACING THE PROBLEM?

Working Professionals (25-34):

People who need accurate answers for their job but work in places where speaking is hard (noisy offices or quiet zones).

4. WHAT IS THE VALUE GENERATED BY SOLVING THIS PROBLEM?

User: If the app can filter out background noise and understand "messy" speech perfectly, they can work faster without typing.

Business: Users will stop "waiting to type" when they are busy. They will use the app more often during the day.

5. WHY SHOULD WE SOLVE THIS PROBLEM NOW?

They are stuck in a Habit. These users have been typing for over a year. If we don't prove that voice is clean and accurate, they will never change.

Thank you!
